

MEDICATIONS and ALLERGIES

PATIENT NAME: _____

PATIENT Date-of-Birth: _____

MEDICATION	STRENGTH/DOSE	HOW OFTEN	REASON/CONDITION

If you have more medications, please attach an additional sheet

Important

There are certain medications that have been associated with extra difficulty during cataract surgery and require additional preparation to ensure a good outcome. It is **IMPORTANT** to notify us if you are currently taking any of these or have **EVER** taken them in the past, so that your case can be properly managed. The medications are commonly associated with men who have prostate issues but can also be taken by women for other problems. Please review the list of medications below and indicate the appropriate response that follows:

Medications: Flomax (Tamsulosin), Hytrin (Terazosin), Cardura (Doxazosin), Uroxatral (Alfuzosin) or Saw Palmetto

___ I have never taken any of the above medications (now or in the past)

___ I am currently taking _____

___ I use to take _____

___ I took medication for my prostate but I can not remember the name.

ALLERGY	REACTION WHEN TAKEN OF EXPOSED
